

An engineered design fee of \$75 per hour will be charged to provide a custom engineered design quotation. The design fee will be charged prior to the engineered design quotation being provided. When the order is placed, the design fee charged will be deducted from the order total. If the custom designed quotation requires ½ hour or less of engineering time, the design fee will be waived. To continue with your request for a custom designed quotation, please complete this form and return it via e-mail or fax to your FlexArm contact. The more comprehensive and accurate the information provided directly affects the amount of time required to provide a custom design.

FlexArm Contact: _____ Date: _____

1. DISTRIBUTOR INFORMATION:

Company: _____ Contact: _____ Phone: _____

2. END USER INFORMATION

Company: _____ Contact: _____ Phone: _____

3. APPLICATION INFORMATION:

1. What type of tool is being used? (circle at right)

- Brand: _____
- Model #: _____

ANGLE

PISTOL GRIP

INLINE

2. How much torque does the tool produce? _____

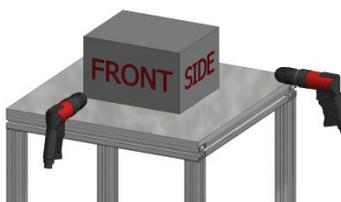

3. How much does the tool weigh including socket or drive bit? _____

4. What surface of the part is the tool being used on? (Check all that apply)

- FRONT TOP
 SIDE BOTH SIDES

- FRONT BOTH SIDES
 SIDE

- TOP

5. What is the goal for the FlexArm? (Check all that apply)

- Torque reaction
- Maintain precise perpendicularity
- Counterbalance the tool weight

6. How much working range is required?

- What is the distance between the locations the tool is being used? _____
- What is the distance from the desired mounting location of the arm to the furthest and nearest locations the tool is being used?

Furthest: _____

Nearest: _____

7. Additional information including pictures/videos (of current process, entire work cell, interferences, etc.)

Prepared By: _____ Date: _____
